

WHAT IS CLAIMED IS:

1. An information response system for communicating a response
information answering a public information provided by an informant,
5 comprising:
 - a display selector for selecting a display out of a plurality of displays
onto which the public information is displayed;
 - a response information receiver for receiving the response
information answering the displayed public information; and
 - 10 a response information communicator for communicating the
response information received by the response information receiver to the
informant.
2. The information response system according to Claim 1, further
15 comprising a response information storage for storing the response
information received by the response information receiver.
3. The information response system according to Claim 2, further
comprising a response information modifier for processing the response
20 information stored in the response information storage.
4. The information response system according to Claim 1, wherein the
display selector selects the display based on the area-designating information
added to the public information.
- 25 5. The information response system according to Claim 1, further
comprising a terminal location information collector for collecting a location
information of a mobile terminal, the response information being output from
the mobile terminal.
- 30 6. An information response method for communicating a response
information to an informant answering a public information provided by the
informant, comprising:
 - display-selecting step for selecting a display out of a plurality of
 - 35 displays for displaying the public information;
 - a response information receiving step for receiving response
information answering the displayed public information; and

a response information communicating step for communicating the response information received in the response information receiving step to the informant.

- 5 7. The information response method according to Claim 6, further comprising the step of storing the response information received in the response information receiving step.
8. The information response method according to Claim 7, further
10 comprising the step of modifying the response information stored in the response information storing step.
9. The information response method according to Claim 6, wherein the
15 display is selected in the display selecting step based on a area-designating information added to the public information.
10. The information response method according to Claim 6, further
20 comprising a collecting terminal location information step for collecting a location information of a mobile terminal, the response information being output from the mobile terminal.
11. A computer program for implementing the information response
method according to Claim 6 with a computer system.
- 25 12. The computer program according to claim 11, further implements storing the response information received in the response information receiving step.
13. The computer program according to claim 12, further implements
30 modifying the response information stored in the response information storing step.
14. The computer program according to claim 11, wherein the display is
35 selected in the display selecting step based on a area-designating information added to the public information.
15. The computer program according to claim 11, further implements

collecting a location information of a mobile terminal, the response information being output from the mobile terminal.
